Candidate Name: John Doe	Predicted Role: Data Scientist
Email: john.doe@email.com Phone: +1 123 456 7890 LinkedIn: linkedin.com/in/... GitHub: github.com/...	

80.0/100 Overall ATS Score	68.1% Job Match Score	Data Scientist Classification Role
--------------------------------------	---------------------------------	--

Resume Evaluation (Heuristics Analysis)

Key Strengths	Areas for Improvement
- Strong contact structure: Both email and phone number are clearly visible and parseable. - Professional profile linkage: Valid LinkedIn account is provided for recruiter reference. - Technical portfolio linkage: GitHub link is present, highlighting active open-source contributions. - Impact-driven description: Quantified project metrics and business impact found in text. - Recruiter-friendly layout: Utilizes structured list formatting and bullet points for high readability. - Rich technical vocabulary: Extracted a diverse range of technical skills across multiple domains.	- Missing section 'Projects': Including dedicated space for projects provides complete background details. - Missing section 'Certifications': Including dedicated space for certifications provides complete background details. - Resume content is too sparse: Provide more detailed descriptions of your tasks and projects to increase ATS keyword matching.

Skills Assessment

Matching Skills: Sql, Python, Machine Learning, Aws

Missing Skills (Gaps): No key skills from Job Description missing! Exceptional match.

Tailored Recommendations

Recommended Hands-on Projects:

- Customer Retention Predictor: Build an end-to-end classification system using XGBoost, deploy it as a REST API with FastAPI, and containerize it using Docker.
- Visual Search Recommender: Build a deep learning image retrieval system using PyTorch and ResNet to recommend visually similar items from an e-commerce dataset.

Recommended Industry Certifications:

- Microsoft Certified: Azure Data Scientist Associate
- Google Professional Data Scientist Certificate

Structured Learning Roadmap:

Step 1: Advanced Statistics & A/B Testing: Deepen knowledge in hypothesis testing, experimental design, and metrics selection.

Step 2: Advanced Machine Learning: Study ensemble methods, gradient boosting parameter tuning, and feature store architectures (e.g., Feast).

Step 3: Model Deployment & Monitoring: Learn FastAPI, Streamlit, and Prometheus/Grafana for model monitoring.
